

Dear Community Partner,

If you would like your organization to participate in our Electric Safety Trailer Demonstration, we will be holding Open Houses at our Service Centers in Buchanan, Benton Harbor and Three Rivers. The dates for these Open Houses will be on May 15th-19th and November 6th – 11th. If either of these weeks work for you, please let us know and we can begin to refine the dates that we will be at each location. Remember, the sooner the better as these slots may fill up quickly!

I&M offers a safety program that demonstrates how important it is to stay away from downed power lines. The safety trailer was designed and built by I&M employees to educate people about what happens when different items such as a tree branch, shovel and shoes come into contact with power lines.

The safety trailer is typically used to educate elementary aged students but the message is appropriate for anyone.

First responders such as police and fire officials also find the presentation to be a beneficial training tool as they assist with guarding wires that have fallen after a storm or are responding to a home that has caught fire.

If you are interested in scheduling a safety trailer demonstration contact Erica Putt (ehputt@aep.com).

Thank you,

Mark A. Robinson
