PRIMARY SIMULCAST

Agencies Toned-Out on BC2PAGE. Units respond on BC1RESP.

BACK-UP SYSTEM

Each transceiver will be programmed with the VCALL (May-Day), BC1DIR, BC2DIR. Since we will only be able to control one channel at a time at each backup regional site, County Dispatch will tone-out the agency(s) on BC2PAGE & direct responders to switch their radios to BC2DIR for two-way communication. If necessary, BC1RESP may be used as an alternate; in those instances responders will be toned on BC1RESP and directed to BC1DIR for two-way. Keep in mind if the back-up system is being used for mobilization operations, the “May-Day” channel (VCALL10) for that area is not selected/monitored; fire-ground communications officer must monitor!
